EXPERIENCE

Avatar Global (Web Developer)

March 2024 – September 2024

Technologies: JQuery | Java | HCL Commerce | Salesforce Commerce Cloud

- I developed new requirements to improve the adaptability of the platform, increasing its flexibility in the face of new user needs.
- Refactored key system modules, reducing reported issues by 20% and improving overall stability.
- Provided ongoing support, quickly resolving operational issues to maintain critical functionalities.
- I participated in the incorporation of new technological tools, improving team productivity by 15%.

Freelancer (Full Stack Developer)

March, June and August 2024

Technologies: Angular | Typescript | JQuery | Bootstrap | ASP .NET | SQL Server | Node.js

- I implemented improvements and new requirements that optimized flows by 15%, increasing user satisfaction.
- I replaced 40% of obsolete dependencies, reducing security risks by 25% and failures by 20%.
- I refactored 30% of the code, improving execution times by 18% and reducing resource consumption by 10%.

Dasser Innovating Solutions S.A.C (Full Stack Developer)

January 2023 – July 2023

Technologies: Angular | Typescript | JQuery | Bootstrap | ASP .NET | SQL Server

- Refactored critical code applying clean architecture, which improved maintainability and increased system performance by 30%.
- I optimized components that slowed down the user experience, achieving 25% faster response times.
- I implemented scalable functionalities that allow handling large volumes of data without affecting performance.
- I automated database queries, optimizing efficiency and reducing response times on requests.

PROJECTS

Internet Banking - La Portuaria Savings and Credit Cooperative (Dasser Innovating Solutions S.A.C)

- I led the implementation of the transfer module, guaranteeing the security of transactions and user experience.
- I led the development of the registration and login module, ensuring a secure and fluid integration with the backend.
- I implemented the administrative configurations module, facilitating the internal management of operational parameters and preferences.
- I developed functionalities for user and request administration, optimizing control and notifications.

Management System - Salaverry International Terminal (Dasser Innovating Solutions S.A.C)

- Updated obsolete libraries that affected system stability, improving long-term performance and security.
- Identified and resolved critical post-migration issues, ensuring continuity of operations without interruptions.
- I implemented improvements requested by users, optimizing the experience and the adaptability of the system to future changes.

Foodius (Personal project)

[Link here](#)

- Led the integration of a public API that provided key data, improving the user experience with an efficient abstraction of external libraries.
- Implemented Firebase Authentication, ensuring fast and secure login using providers such as Google.

Windbnb (Personal project)

[Link here](#)

- Led the development of reusable components, optimizing modularity and efficient class management with CSS Modules.
- I optimized the dynamic filtering of information through route parameters, improving search speed and accuracy of results.

EDUCATION

Systems and Computer Engineering (National University of Santa)

April 2019 – January 2024

ADDITIONAL INFORMATION

Programming Languages

- Java
- Javascript / Typescript
- C#

Technologies

- | | | |
|-----------|-----------------|----------------------|
| • React | • Spring | • MySQL – SQL Server |
| • Angular | • ASP .NET Core | • Git |
| • Node | • GraphQL | • JQuery |
